Sutra Plugins

# Use the Access Rules table

Content Restriction · https://sutraplugins.com/docs/membersutra/access-rules/

The Access Rules table.

Go to **MemberSutra → Content Restriction → Access Rules**. Each row is a piece of content; the **Who can open this** column shows the result of your plans and rules.

## Change access for one item

1. Find the item (filter by type or search).
2. Tick **Block non-members** to make it members-only, or block the members of a specific plan.
3. Click **Save changes**.

Changes you make here are manual overrides on top of what your plans unlock. **Remove manual overrides** returns selected items to the plan settings; **Discard changes** drops edits you have not saved.

**Tip:** Use the table to double-check a new plan: every item the plan should unlock must show that plan under **Who can open this**.
