Sutra Plugins

Download files and update notices

Content Restriction · https://sutraplugins.com/docs/membersutra/download-files-and-update-notices/

Pro feature: These options need MemberSutra Pro.

When **How to manage access to restricted products** (MemberSutra → Content Restriction → Restriction Rules) is set to “Everybody can view products, but only members can download them”, everyone can see the product and only members can download its files. These options control what shoppers see on the product page.

Where the download link shows

Under **Download link position** choose Download Tab, After / Before Summary, After / Before Description, after the Add to Cart button – or **Use Shortcode** and place `[membersutrapro_download_link]` yourself.

Config Shortcode options

Click **Config Shortcode** to switch on the extras shown with the download link. Each one also has its own shortcode, shown next to it with a Copy button.

- **File Size**, **Credit Required for Download**, **Credits Available** and **Remaining Credits**, each with your own prefix text.
- **Display Download Files**: lists the names of all download files of the product. Members get a link for each file; other visitors see a message when they point at a name. The latest file (the last one in the product’s Downloadable files list) gets a badge. You set the message and the badge text.
- **Notify Updates**: a “Notify me about updates” switch. Visitors who are not logged in are asked to log in; logged-in users get an e-mail when a download file is added or replaced on the product. You set the switch text, the message for guests and the e-mail subject and text.

Tip: Files attached from Google Drive with the Google Drive Integration add-on are listed by their name like any other download file.

Next steps

- Members-only products and shop modes
- Protected downloads and download credits
- Shortcodes reference
