Set up Stripe

Payment Gateways · https://sutraplugins.com/docs/stripe-setup/

FlexWoo Stripe Payments dashboard.

1. Install and activate **FlexWoo Stripe Payments**.
2. Go to **WooCommerce → FlexWoo Stripe Payments → Settings**.
3. In your Stripe Dashboard open **Developers → API keys** and copy the publishable and secret keys.
4. Paste the **Test** keys first and click **Test connection**.
5. Under **Card checkout**, set the title customers see, the capture method, the statement descriptor and the accepted card brands. Save.
6. Open the **Webhooks** page and create or sync the webhook, so Stripe can tell your site about renewals, refunds and disputes.
7. Place a test order with a Stripe test card, then paste your **Live** keys when you are ready.

⚠ **Important:** Webhooks are required for subscriptions billed by Stripe. Without them renewals are still picked up by an hourly check, but late.

The Stripe screens also show payment methods, disputes, payouts and logs.
