Sutra Plugins

Set up Apple Pay and Google Pay

Guides · https://sutraplugins.com/docs/sutrapay-for-paypal/paypal-apple-pay-google-pay/

Apple Pay and Google Pay appear at checkout through PayPal. Both are off until you turn them on, and the wallet must be enabled on your PayPal account first.

Google Pay

1. Enable Google Pay on your PayPal account.
2. Open **WooCommerce → SutraPay for PayPal → Apple Pay / Google Pay**, turn on **Enable Google Pay** and save.

Apple Pay

1. In the PayPal developer dashboard, open Apple Pay → Manage domains and add your shop's domain.
2. PayPal gives you a domain-association file. Paste its contents into **Apple domain-association file** on the Apple Pay / Google Pay screen.
3. Turn on **Enable Apple Pay** and save. The file is then served at your-site/.well-known/apple-developer-merchantid-domain-association.

Apple Pay shows in Safari on Apple devices over HTTPS, and stays hidden until the domain-association file is added.
