Sutra Plugins

What SutraPay for PayPal can do

Getting started · https://sutraplugins.com/docs/sutrapay-for-paypal/paypal-features/

SutraPay for PayPal lets customers pay with PayPal, Venmo, Pay Later, Apple Pay, Google Pay, and credit/debit cards, using PayPal's official REST APIs and PayPal's JavaScript SDK v6 (no bundled third-party SDK).

Features

- PayPal, Venmo, Pay Later and PayPal Credit buttons (PayPal JavaScript SDK v6) on the product, cart, checkout, and mini-cart
- Pay Later installment messaging
- Advanced Credit and Debit Card Payments (hosted card fields) with 3-D Secure
- Apple Pay and Google Pay at checkout
- Saved payment methods (PayPal Vault) for PayPal accounts and cards, under My Account -> Payment methods, at checkout and on the order Pay page
- Subscription renewals charged automatically with the saved method: WooCommerce Subscriptions, and any subscription plugin that uses the same renewal hook
- Product, cart and mini-cart buttons where the shopper picks the shipping address and shipping option inside the PayPal window; product-page buttons buy exactly what the add-to-cart form says (variations, quantities, product add-on fields)
- Fastlane by PayPal for guests (US)
- Venmo and Apple Pay saved for subscription renewals (where PayPal enables it)
- "Authorize only" payments captured or voided from the order screen, or automatically when the order is completed / cancelled
- Shipment tracking numbers sent to PayPal (by hand, or from WooCommerce ShipStation); PayPal fee and net amount on the order

- Disputes: orders put on hold when a dispute opens and back to their status when it closes in your favour
- Optional reCAPTCHA v3 on card payments against card testing
- Move subscriptions over from Payment Plugins for PayPal, WooCommerce PayPal Payments, Angell EYE and WooCommerce PayPal Checkout
- Shortcodes and Elementor widgets for the buttons and Pay Later messages; Pay Later messages on shop pages and the mini-cart, styled per page
- Works with WooCommerce Pre-Orders, CheckoutWC, FunnelKit (checkout, side cart, one-click upsells), Germanized, Mondial Relay, the Mini-Cart block, product option plugins and WPML
- Webhook listener to keep orders in sync with PayPal-side events
- HPOS (custom order tables) compatible

Subscriptions

Your subscription plugin decides when a renewal is due and what it costs -- including a renewal coupon or a changed price -- and this plugin charges each renewal order with the customer's saved PayPal account or card, while the customer is away. A renewal that needs the customer (their bank asks for 3-D Secure) fails with a clear note and can be paid by the customer from the order's Pay page, where the saved methods are offered too.

The plugin works with WooCommerce Subscriptions and with other subscription plugins that fire the standard `woocommerce_scheduled_subscription_payment_{gateway}` action. Results are announced with `sutrapay_paypal_renewal_payment_result`, `sutrapay_paypal_renewal_requires_authentication`, `sutrapay_paypal_renewal_paid_by_customer` and `sutrapay_paypal_payment_method_saved`.

If your PayPal account cannot save payment methods, a subscription sold through the `sutrapay_paypal_recurring_plan` filter is created as a PayPal-run subscription instead, which PayPal bills by itself at the plan's price.
