SutraPay for PayPal with other plugins

SutraPay for PayPal works with the plugins many stores already use. Most need no setting at all.

WooCommerce Pre-Orders

Pre-orders charged upfront are paid like any order. For pre-orders charged upon release, the customer approves saving their PayPal account at checkout and nothing is charged; when you release the product, the saved method is charged. If that charge fails, the order is marked Failed and Pre-Orders e-mails the customer. Upon-release pre-orders need a customer account.

CheckoutWC and FunnelKit

With CheckoutWC, the PayPal buttons show in its express payment area. On FunnelKit checkout pages they join its express buttons, and with mini-cart buttons on they show under the FunnelKit side cart's checkout button. FunnelKit one-click upsells are charged to the PayPal account or card the customer saved with their order; when nothing was saved, the upsell offers are skipped.

Checkout and product plugins

- Germanized legal checkboxes, checkout field editors and other checkout rules are checked for the express PayPal buttons at checkout too, and their fields are saved on the order.
- Mondial Relay: a Point Relais is chosen on the checkout page, so its rates are not offered in the PayPal window and the product and cart buttons ask the shopper to use the checkout.
- Product Add-Ons, Advanced Product Fields and Extra Product Options: the product-page PayPal button buys the product with the options the shopper chose (uploaded files are not supported there).
- WooCommerce ShipStation: tracking numbers are sent to PayPal (see the capture and tracking guide).

Blocks, translations and memberships

The buttons also show in WooCommerce's Mini-Cart block (block themes) when mini-cart buttons are on. WPML can translate the PayPal and card gateway titles. MemberSutra memberships and subscriptions, and WooCommerce Subscriptions, renew with the saved method.
