Choose the checkout mode and payment methods

Guides · https://sutraplugins.com/docs/sutrapay-for-razorpay/razorpay-checkout-mode-payment-methods/

After placing the order, the customer pays with Razorpay Checkout. You choose how it opens and which payment methods it offers.

Checkout mode

Open **WooCommerce → SutraPay for Razorpay → Settings → Checkout** and pick the **Checkout Mode**:

- **Standard Checkout (popup on the order-pay page)**: the Razorpay window opens over your store.
- **Redirect**: Razorpay Checkout opens on its own page, then returns to your store. Useful when a theme or plugin gets in the way of the popup.

Payment methods

Under **Payment Methods**, choose what one-time payments offer: UPI, Cards, Netbanking, Wallets, EMI and Pay Later (the first four by default). Subscriptions always show the methods Razorpay allows for recurring payments: cards, UPI and eMandate.

Both the classic checkout and the WooCommerce Cart and Checkout blocks are supported. Every payment is checked on your server (Razorpay's signature, the order, amount and currency) before the order is marked paid.
