# How Razorpay subscriptions are billed

SutraPay for Razorpay works with MemberSutra (free and Pro) and WooCommerce Subscriptions. Each subscription is billed one of two ways; the purchase order's notes say which, and why.

## Charged by Razorpay

When every renewal costs the same, the subscription runs as a Razorpay Subscription on the card or UPI mandate the customer authorized. The first payment may differ (sign-up fee, trial, coupon, tax) and is collected when the customer authorizes the subscription; Razorpay charges the plan price from the first renewal date. Cancelling, pausing and resuming on your store is sent to Razorpay, and renewals, failed charges and cancellations made in Razorpay are recorded on your store.

## Invoiced by this site

When renewal prices change (for example a discount for the first few renewals), or Razorpay cannot bill the period or currency, the first payment is taken with Razorpay and each renewal is invoiced by your store, payable with Razorpay.

## Razorpay plans

- With **Auto-create Razorpay Plans** on (Settings → Subscriptions), the plugin creates one plan per price and interval.
- Or set a **Razorpay Plan ID** on a WooCommerce Subscriptions product; its amount, currency and interval must match the subscription.

See every subscription purchase under **WooCommerce → SutraPay for Razorpay → Subscriptions**.
