Sutra Plugins

Advanced settings explained

Guides · https://sutraplugins.com/docs/sutrapay-for-stripe/stripe-advanced-settings/

All advanced settings are off (or unchanged) until you turn them on, under **WooCommerce → SutraPay for Stripe → Settings → Advanced**.

Payments

- **Always ask for 3D Secure**: the card holder's bank verifies every card payment made at checkout. Renewals are never asked, because nobody is there to answer.
- **Extended authorization**: with manual capture, Stripe holds the card payment for up to 30 days instead of 7 where the card network allows it.
- **Stripe email receipts**: Stripe also emails its own receipt to the billing email.
- **Card installments**: shoppers can split a card payment into monthly installments. Stripe accounts in Mexico and Japan only.
- **Payment method configuration**: if you made several payment method sets in the Stripe Dashboard, paste the pmc_... id of the one the checkout should use (test and live separately). Empty: your account's default set.
- **Place order button text**: your own text on the checkout button while a SutraPay option is selected.

Orders and disputes

- **Refund on cancel**: when you cancel an order paid with Stripe, an authorized-only payment is released and a captured one is refunded for what is left.
- **When a dispute is opened**: the order status while a dispute is open (for example On hold, so nothing more ships). A won dispute puts the earlier status back.
- **When a dispute is lost**: the order status after a lost dispute (for example Refunded).

- **Stripe customers for guests**: off means guests are charged without a Stripe customer record, so fewer personal details are stored at Stripe. A customer is still made when a payment method must be kept.

Also under Advanced

Pay-later messaging and moving subscriptions from another Stripe plugin.
