Sutra Plugins

What SutraPay for Stripe can do

Getting started · https://sutraplugins.com/docs/sutrapay-for-stripe/stripe-features/

SutraPay for Stripe is a free Stripe payment gateway for WooCommerce.

Payment methods

- Stripe's Payment Element at checkout: cards (3D Secure 2, SCA-ready), Link, and every local payment method you turn on in your Stripe Dashboard — SEPA Direct Debit, iDEAL, Bancontact, EPS, Przelewy24, Klarna, Afterpay / Clearpay, Affirm, US bank accounts (ACH), Cash App Pay and more. Stripe only shows a method where it suits the customer's country, the currency and the amount.
- Express checkout with Stripe's Express Checkout Element: Apple Pay, Google Pay and Link buttons (plus PayPal and Amazon Pay when enabled in Stripe) above the checkout form, on the cart and on product pages ("Buy now"), with wallet-driven shipping address and rate selection.
- Full support for the WooCommerce Cart and Checkout blocks and the classic checkout, the order "Pay" page and My Account > Add payment method.

Safe by design

- The payment is created and confirmed on the server only after WooCommerce has validated the checkout and created the order, for exactly the order total — a refused checkout never charges the customer.
- 3D Secure and bank redirects return to a page that reads the payment's real status from Stripe before the order is marked paid; webhooks finish the order if the customer never comes back.
- Methods that settle later (SEPA Direct Debit, ACH, Bacs) put the order On hold until Stripe confirms the payment.

Store tools

- Saved payment methods (cards, SEPA Direct Debit, bank accounts, Link) for logged-in customers, with labels.
- Full and partial refunds and manual capture from the order screen; refunds made in the Stripe Dashboard are recorded on the order.
- WooCommerce Subscriptions: sign-up (including $0 free trials), automatic renewals with any saved reusable method (also for subscriptions bought with Apple Pay / Google Pay), retries, and customer / admin payment method changes.
- Disputes screen with text and file evidence; Payouts screen with the orders in each payout; per-order Stripe fee, net and availability date.
- Webhooks with signature verification and a one-click "create the endpoint for me" button; Stripe Radar reviews put the order on hold.
- One settings app (Dashboard, Settings, Payment Methods, Disputes, Payouts, Webhooks, Logs) with a setup checklist.

Checkout options

- Payment Element layout: a list with radio buttons (default), the same list spaced out, or tabs.
- Separate checkout rows: show chosen methods (Klarna, Affirm, iDEAL, SEPA Direct Debit, Cash App Pay and 30 more) as their own options in the checkout's payment list, each with its own title, in the classic checkout and the Checkout block. The card option then leaves them out.
- Pay-later messaging ("4 interest-free payments" from Klarna, Afterpay / Clearpay and Affirm) on product, cart, checkout and shop pages.
- The `[sutrapay_stripe_express]` shortcode places the express buttons on product and cart pages; product add-on fields (Product Add-Ons, Extra Product Options, Advanced Product Fields) stay with "Buy now".
- WooCommerce Pre-Orders: pre-orders charged upon release save the payment method at checkout and are charged on release.

Advanced settings (all off by default)

- Always ask for 3D Secure, extended authorization for manual capture, Stripe email receipts, card installments (Stripe accounts in Mexico and Japan), and a payment method configuration for test and live mode.
- Refund or release the payment when an order is cancelled, order statuses for opened and lost disputes, Stripe customers for guests on or off, and your own Place order button text.
- Move WooCommerce Subscriptions from WooCommerce Stripe Gateway, Payment Plugins for Stripe, FunnelKit Stripe or WebToffee Stripe to SutraPay (same Stripe account; customers keep their saved card), from Settings > Advanced or `wp sutrapay-stripe move-subscriptions`.
- Runs next to Payment Plugins for Stripe; WPML and Polylang can translate the payment method titles and button text.
