Sutra Plugins

Install and set up SutraPay for Stripe

Getting started · https://sutraplugins.com/docs/sutrapay-for-stripe/stripe-install-and-set-up/

This guide installs SutraPay for Stripe on your WooCommerce store and connects it to your Stripe account. Use test (sandbox) mode first, then switch to live.

Before you start

- WordPress 6.4 or later and PHP 8.0 or later.
- WooCommerce installed and active.
- A Stripe account with API access.

Install and connect

1. Install the plugin from the Plugins screen (or upload the zip) and activate it. WooCommerce must be installed and active.
2. Go to WooCommerce > SutraPay for Stripe > Settings and add your Stripe publishable and secret keys (test mode is on by default). Use "Test connection" to confirm they work.
3. Open Webhooks and click "Create / Sync webhook" (or add the shown URL in your Stripe Dashboard).
4. In your Stripe Dashboard, under Settings > Payment methods, turn on the payment methods you want to offer.
5. Open Payment Methods to set up the express checkout buttons and register your domain for Apple Pay.
6. Place a test order with one of Stripe's test cards to confirm everything works end to end.

Next steps
