Sutra Plugins

Pre-orders, product add-ons and the express shortcode

Guides · https://sutraplugins.com/docs/sutrapay-for-stripe/stripe-pre-orders-add-ons-shortcode/

WooCommerce Pre-Orders

Pre-orders charged upfront are paid at checkout like any order. Pre-orders charged upon release only verify and save the payment method at checkout; the order shows as pre-ordered and is charged when you release the product in Pre-Orders. If that charge fails, the order is marked Failed so the customer can pay it from their account. The express (wallet) buttons are hidden for those carts, because a wallet payment would charge straight away.

Product add-ons with "Buy now"

The Apple Pay, Google Pay and Link buttons on product pages send the product form's other fields along, so Product Add-Ons, Extra Product Options and Advanced Product Fields keep their options and prices in the order.

Place the express buttons yourself

Add the shortcode `[sutrapay_stripe_express]` to a product page or the cart page (for example in a page builder) to show the express buttons there. The same rules apply as for the automatic buttons. If you use the shortcode, switch the automatic location off for that page type under Payment Methods → Express checkout, so the buttons do not show twice.
