Sutra Plugins

Show payment methods as separate checkout rows

Guides · https://sutraplugins.com/docs/sutrapay-for-stripe/stripe-separate-checkout-rows/

By default the card option at checkout holds every payment method you turned on in Stripe. You can also show chosen methods, such as Klarna, Affirm, iDEAL or SEPA Direct Debit, as their own options in the checkout's payment list, each with its own title. This helps when another plugin shows, hides or adds a fee per payment option, or when you simply want Klarna to stand out.

Turn on a separate row

1. Turn the method on in your Stripe Dashboard under Settings → Payment methods.
2. Open **WooCommerce → SutraPay for Stripe → Settings → Payment Element**.
3. Under **Separate checkout rows**, tick the method. Type a title next to it if you want one (empty: the method's name, for example "Klarna").
4. Click **Save changes** and open your checkout: the method is now its own option, and the card option no longer lists it.

Good to know

- A row only shows in the currencies Stripe offers the method in (iDEAL: EUR, Cash App Pay: USD, ...). If Stripe cannot offer it for a cart (country, amount), the row hides itself.
- Methods that cannot be charged again later (Klarna, Affirm, Afterpay, ...) are not offered for subscriptions. Cards, SEPA Direct Debit, US bank accounts, and iDEAL / Bancontact (saved as SEPA Direct Debit) are.
- Saved payment methods stay on the card option: a separate row always asks for new details.
- All rows use the same payment, webhook and refund handling as the card option. Refunds work from the order screen as usual.

- Works in the classic checkout, the order Pay page and the Checkout block.
- You may still see "Klarna, powered by Link" inside the card option. That is Stripe's Link wallet, not the Klarna method itself.

Change how the card option looks

Under **Payment Element → Layout** choose a list with radio buttons (default), the same list spaced out, or tabs.
